

Smoke Hood

EVACUATION MASK

- Offers at least 15 minutes* protection against poisonous gases such as the dangerous carbon monoxide from the start of a fire
- resists temperatures of up to 800 ° Celsius
- tested and proved in accordance with the demands of the European Standard EN 403: 1993-5
- easy to use, fast and simple to apply
- appropriate for single use only
- operation guaranteed for five years after production date
- free of charge replacement fur use in case of smoke or gas fumes in insurable situations.

* In order to obtain the EN 403 the mask has to provide protection for at least 15 minutes against all gases foreseen in the EN 403 norm. In tests, the Smoke Hood offered protection over 60 minutes.

'BECAUSE EVERY SECOND COUNTS...'

'The fire brigades use already evacuation masks to get people out of burning houses or office buildings. As every second counts, it should be recommended to private and companies to have evacuation masks available. This will enable them to take immediate action if the smoke detector gives alarm signals. Thus no valuable seconds will be lost', as fire-fighter Cor Kraaijenhagen says, who has more than 25 years active service.

'The Smoke Hood is a useful supplement to the existing auxiliary tools. As a result of the enormous smoke fumes, however, people often get panicky. Smoke is indeed the enemy nr. 1 in fires. Annually there dozens of people die due to the escape of noxious elements. The Smoke Hood is one means of leaving the building fast and safely as the person's head and lungs are protected. Therefore people will remain calmer and may deal with the situation more effectively'.

'Another advantage of the Smoke Hood is that it is easy to use. One has only to open the airtight tin-package and pull it over one's head. The filter is activated directly. Thus people will receive sufficient oxygen, they will remain fully conscious and will be able to find the (emergency) exit. The Smoke Hood has been tested extensively and satisfies all demands. The mask is vacuum packed. It consists of fire resistant material. Moreover it protects for at least 15 minutes. Experience has taught us that a quarter of an hour is sufficient to escape safely from a burning building'.

BREATHING SAFELY!

INDISPENSABLE FOR FAST EVACUATION
IN THE EVENT OF FIRE OR SMOKE FUMES!

Smoke Hood

EVACUATION MASK

BREATHING SAFELY

Fire safety is of great interest at present. Fast and efficient action is, of course, of vital importance. Preventive measures such as smoke detectors, fire blankets and fire extinguishers all play an important role. **Nevertheless experience shows that it is the strong smoke fumes at the start of a fire which leads to most fatalities.** Smoke in the eyes, disorientation and the escape of poisonous gases hamper attempts to leave a building in time. The Smoke Hood evacuation mask helps to keep one's head cool. Moreover it is indispensable for a fast and a safe evacuation in the case of fire or smoke fumes. The Smoke Hood is resistant to a heat of 800 ° Celsius. Thanks to the heat-resisting visor the wearer's vision remains unaffected. Thus the building can be left without panic.

EUROPEAN APPROVAL

The Smoke Hood evacuation mask offers **at least 15 minutes protection** against the fast smoke fumes and all escaping toxic gases according to the EN403 norm. The mask has been tested extensively. It actually tested to over 60 minutes and conforms to the strict conditions of the European Standard EN 403:1993-5. The first purifying layer filters the smoke and soot particles. In the second purifying filtration part the poisonous gases are stopped. Then remaining carbon monoxide is converted into carbon dioxide by means of a catalyst. A final layer will then absorb this chemical element. Within seconds one can breathe again safely.

SAFE SELF EVACUATION

Recent figures show that annually dozens of people die in fires. Moreover hundreds of people with serious injuries will have to be hospitalised. The Smoke Hood may change this. The evacuation mask is appropriate for single only. The filter is guaranteed for five years after production. **The presence of the Smoke Hood is reassuring. However, by no means it is meant to replace the task of the professional fire brigade. The Smoke Hood only procures a safe and fast self-evacuation. At home and at school, in offices and workshops, discos, hotels, health centres and other places where many people meet. For international truck and bus drivers (tunnels) and businessmen (hotels) the presence of a Smoke Hood can be of vital importance.**
